

TRAXDA
Lift Kits - Made in USA

Toll free: 888-660-5892
email: info@traxda.com

SAFETY WARNING!
Always use the correct tools, and wear safety goggles. We **STRONGLY** recommend installation by a licensed mechanic on a properly secured locking lift.

TIRE FITMENT ADVICE

The best way to ensure proper tire fitment is to install the kit before purchasing your wheels and tires. Always test fit tires and wheels before purchasing.

VEHICLE RIDE WARNING!

Trucks with lift or level kits installed have a higher center of gravity. Aggressive and sudden direction changes may cause a tip over.

105017 Ford F-150 2WD Lift and Level Kit

This kit contains:

- 2 - Strut Caps
- 1 - Hardware Pack
- 2 - Rear Lift Blocks
- 1 - U-bolt Hardware Pack
- 4 - U-bolts
- Instructions
- Warranty Card
- Stickers

Installation Tips

Always use caution handling ABS or wheel sensor wiring. Avoid tension of any kind on wiring harness as this may cause damage or failure.

1. Trucks are often not level side to side from the factory. Please measure before installation.
2. Re-torque all hardware to manufactures specifications
3. When aligning, to get the best tire wear use our supplied specifications. OEM specifications are for trucks with stock wheels and tires. Larger tires will wear differently.
4. All instructions are written with vehicle on a 2-post lift with tires removed.

Front Installation

Step 1

Disconnect sway bar link from control arm and separate tie rod end. On 4x4 models remove axle nut at hub. Support spindle assembly. Use caution with any ABS wiring to prevent damage. Separate upper ball joint. Remove lower strut mounting bolt and upper strut mount nuts and remove strut.

Step 2

Install TRAXDA spacer on the strut as shown in Figure A. Note the twisted shape of the TRAXDA cap, the strut will be rotated 180 degrees when reinstalled in the truck.

Step 3

Reinstall the strut assembly in reverse of dis-assembly. It may be necessary to use a pry bar to aid in the re-installation of the strut assembly. Use a pit jack to raise the lower control arm and re-connect ball joint. Note: a tall jack may be needed under the rear bumper to steady the truck on the lift. Verify that all hardware has been tightened to the proper torque specs.

Figure A: Illustration is for reference only. Part dimensions will vary from kit to kit.

Trucks with lift or level kits installed have a higher center of gravity. Aggressive and sudden direction changes may cause a tip over.

105017 Installation Instructions continued

Rear Installation

Disconnect ABS wires so they can droop. Loosen lower shock bolt and remove. Use a pit jack to support the differential. Remove U-bolts from one side of the truck only. This will help keep the differential steady. Remove factory block and install TRAXDA lift block between differential and leaf spring as shown in illustration below.. Install U-bolts supplied with TRAXDA kit. Re-install lower shock bolts. Repeat on the other side of the truck.

Torque U-bolt hardware to 75 ft. lbs.
Never reuse U-bolts

	Left	Right
Caster (degrees)	3	3.5
Camber (degrees)	0	-1/4 or -.25
Toe	1/16 or .0625 inch toe in	
Special Tools	none	

Alignment notes:

We recommend that a technician with experience doing alignments on lifted trucks perform the alignment. Large tires wear differently than OEM sized tires. Always do an alignment after changing tires on a vehicle.
